Summary

Accomplished Senior Software Engineer with 10+ years experience in building scalable applications and leading cross-functional teams. Proven in optimizing development processes, mentoring engineers, and delivering high-quality software products. Passionate about driving productivity and efficiency through best practices.

Skills

- **Languages:** Ruby, JavaScript, Python, SQL, HTML5, CSS
- **Technologies:** Ruby on Rails, Vue.js, Bootstrap, Docker, Git, AWS, MySQL, PostgreSQL, Redis, Elasticsearch, ReactJS, RSpec, Kubernetes
- **Practices:** RESTful API Design, Service-Oriented Architecture, SOLID Design Principles, Object Oriented Design, Object Oriented Programming, DevOps, Design Patterns, Refactoring, TDD, Performance Optimization, Clear Communication

Work Experience

Argonne National laboratory

Mar 2025 - Present

Senior Software Engineer - Contract

Remote

- Develop and maintain Argonne internal and external facing systems.

AI-Powered Caregiver Platform

Jun 2024 - Present

Solopreneur

Atlanta, GA

- Designed and developed a web application to help caregivers manage patient health more efficiently, integrating AI-driven insights and intuitive dashboards.
- Built a streamlined appointment management system to track doctor visits across multiple facilities.
- Implemented AI-powered medication management to consolidate prescriptions and flag potential drug interactions.
- Developed health monitoring features, enabling caregivers to log daily vitals and mental well-being metrics.
- Implemented automated health summaries, simplifying medical records and lab results for caregivers and patients.

Panorama Education

Apr 2022 - Jun 2024

Lead Software Engineer

Remote

- Led the development of the Playbook application, a strategies based application used by teachers to help millions of students across all fifty states.
- Mentored junior developers throughout the Playbook application development process and helped build their technical and leadership skills so that they can be productive across the Panorama platform.
- Integrated the Algolia enterprise search platform with the Playbook Ruby on Rails application to enhance search functionality for teachers, resulting in faster and more accurate search results.
- Integrated Contentful CMS with the Playbook application using web-hooks, which allowed strategy providers to easily add searchable content, improving content management efficiency.
- Rebuilt the Client Staff Management application for over 2000 clients by transforming it into a single-page Vue app and re-architecting the backend in Ruby on Rails.
- Led the migration of all applications to a single monorepo from multiple git repositories, significantly enhancing collaboration between teams, improving code maintainability, and fostering a more cohesive development environment.
- Built CI/CD pipelines for all applications, enabling streamlined and reliable production deployments from the monorepo, which increased deployment frequency by 40% and reduced deployment-related issues by 50%.
- Led the migration to Docker Desktop for local development across all engineering departments, ensuring all engineers utilized Docker and containers, which improved development consistency and reduced setup time

GovCIO

Sep 2020 - Apr 2022

Senior Software Engineer

Remote

- Designed and developed a pre-appointment Patient-Questionnaire API using Ruby on Rails for VA.gov, serving over 1200 healthcare facilities. This API streamlined the pre-check-in process, allowing veterans to complete questionnaires before their appointments, which improved efficiency and preparedness for healthcare providers.
- Designed and developed an appointment Check-in API using Ruby on Rails for VA.gov, enabling 19 million veterans to check in from home before their appointments. Collaborated with product managers and engineers across the VA ecosystem to plan, break down, and implement this API, which significantly enhanced the user experience and reduced wait times at VA facilities.
- Started a weekly developer forum to coach engineers on best practices and introduce new technologies. This platform provided an open space for questions and learning, which ultimately reduced time to release by 25% and fostered continuous improvement within the team.

Rent.com

Jul 2011 - Sep 2020

Tech Lead

Atlanta, GA

- Architected and led the development of the Rent.com mobile API gateway which led to faster application performance and a 25% increase in mobile lead conversions.
- Architected and developed the API gateway for Apartmentguide.com using Ruby on Rails, resulting in a traffic increase of over 50%. Worked closely with cross-functional teams to deliver a seamless and efficient integration.
- Led the development of a suite of services using Ruby on Rails for 25,000 B2B customers, increasing leads and conversions by 25%. Collaborated with product managers, designers, and engineers to ensure alignment and deliver impactful features.
- Developed robust reporting capabilities for the Ratings and Reviews suite of services using Ruby on Rails, enhancing client decision-making and improving overall consumer satisfaction by 15%.
- Created a proof of concept for user authentication and role-based access using Ruby on Rails and OAuth2 protocol, enhancing security and user management

Rent.com

Jan 2011 - Jul 2013

Software Engineer

Atlanta, GA

- Contributed new features and bug fixes for the Apartmentguide.com application and website, improving user experience and reducing error rates.
- Worked on the user and user preferences suite of services, delivering bug fixes and new features, enhancing user satisfaction and system reliability.
- Led and directed team members during project sprints, ensuring timely delivery of features and maintaining code quality
- Developed code in Object-Oriented Programming using Ruby on Rails in an Agile SCRUM environment, improving code maintainability and team collaboration
- Unit tested Restful APIs with RSpec following TDD principles, ensuring code quality and reducing bugs
- Collaborated in a pair programming environment to enhance code quality and ensure adherence to SOLID design principles, resulting in fewer bugs and more maintainable code

Education

University of Arkansas

Mechanical Engineering

Fayetteville, Arkansas
