

DILLO RAJU

SENIOR SOFTWARE ENGINEER & TECHNICAL LEAD

AI-Enabled Product Development | Application Modernization | Developer Productivity

Roswell, GA | dillo.raju.media@proton.me | linkedin.com/in/dillo-raju | github.com/dillo

PROFESSIONAL SUMMARY

Product-minded senior software engineer and technical lead who builds scalable applications, modernizes legacy platforms, and turns AI-assisted development into repeatable engineering workflows. Combines hands-on backend and full-stack delivery with architecture, cross-functional product leadership, mentoring, and developer enablement across mission-driven, education, healthcare, and real estate products.

CORE EXPERTISE

AI & Developer Productivity: Codex, Claude Code, AI-agent skills, agentic workflows, code generation, upgrade automation

Languages & Frameworks: Ruby, Ruby on Rails, Java, Spring Boot, JavaScript, React, Vue.js, Python, SQL

Architecture & Delivery: REST APIs, application modernization, service-oriented architecture, CI/CD, Docker, AWS, PostgreSQL, MySQL, Redis, Elasticsearch, TDD

PROFESSIONAL EXPERIENCE

Argonne National Laboratory

Mar 2025 - Present

Senior Software Engineer | Remote

- Co-lead modernization of approximately 20 legacy Ruby applications to Java, Spring Boot, and React; define architecture, migration standards, sequencing, technical requirements, and code-review practices.
- Created an AI-agent workflow for Codex and Claude Code that automates Java 24 and Spring Boot 4 upgrades, reducing a typical project's upgrade effort from several weeks to a few hours; adopted by 10+ developers.
- Built an AI-agent skill that analyzes legacy Rails applications and generates implementation stories for a new Java services layer and React user interface, making feature migration easier to plan and execute.
- Designed and built a pre-production release-tracking and knowledge tool spanning 148 active applications, with reporting on releases, cadence, history, and changelogs; leaders request generated reports before planning meetings.
- Coach engineers on Codex, Claude Code, and agentic development practices while building and maintaining enterprise applications, including systems supporting operational-safety workflows.

Panorama Education

Apr 2022 - Jun 2024

Lead Software Engineer | Remote

- Led the end-to-end revamp of Playbook, a strategy application used by educators serving more than 20 million students across school districts in all 50 states; coordinated multiple teams and mentored junior developers.
- Integrated Algolia search and Contentful CMS with the Ruby on Rails platform, improving content discovery and enabling strategy providers to publish searchable content efficiently.
- Re-architected the Client Staff Management application for 2,000+ clients as a Vue.js single-page application with a Ruby on Rails backend.
- Led the move to a shared monorepo, built CI/CD pipelines, and standardized Docker-based development, increasing deployment frequency by 40% and reducing deployment-related issues by 50%.

PROFESSIONAL EXPERIENCE - CONTINUED

GovCIO

Sep 2020 - Apr 2022

Senior Software Engineer & Backend Lead | *Remote*

- Designed and developed a Ruby on Rails patient-questionnaire API for VA.gov serving 1,200+ healthcare facilities, improving pre-appointment preparedness for veterans and care teams.
- Designed a home check-in API available to 19 million veterans, partnering with product managers and engineers across the VA ecosystem to improve access and reduce facility wait times.
- Created a weekly developer forum to coach engineers on practices and emerging technologies, contributing to a 25% reduction in time to release.

RentPath (formerly Rent.com / Apartment Guide)

Jan 2011 - Sep 2020

Technical Lead Engineer, Jul 2013 - Sep 2020 | Software Engineer, Jan 2011 - Jul 2013 | *Atlanta, GA*

- Promoted to Technical Lead and partnered with product managers, designers, and user-experience specialists to define requirements, scope, and delivery plans for mobile and B2B products.
- Architected API gateways for Rent.com and ApartmentGuide.com mobile applications, improving performance, increasing mobile lead conversions by 25%, and supporting a traffic increase of more than 50%.
- Led development of a services platform for 25,000 B2B customers, increasing leads and conversions by 25%.
- Developed reporting capabilities for a ratings and reviews platform, improving customer decision-making and consumer satisfaction by 15%.
- Built an OAuth2-based customer portal with role-based access and single sign-on across integrated services.
- Led sprint execution and reinforced test-driven development, pair programming, object-oriented design, and SOLID engineering practices.

SELECTED PROJECT

AI-Powered Caregiver Platform

2024 - Present

Independent Prototype | *Work in Progress*

- Prototyping a caregiver coordination application that brings appointments, medication information, and daily health observations into one workflow.
- Built appointment tracking across multiple facilities and exploratory tools for organizing medication and health information.
- Developed AI-assisted summaries designed to make medical records and laboratory results easier for caregivers and patients to review.
